Galenosa Oeste

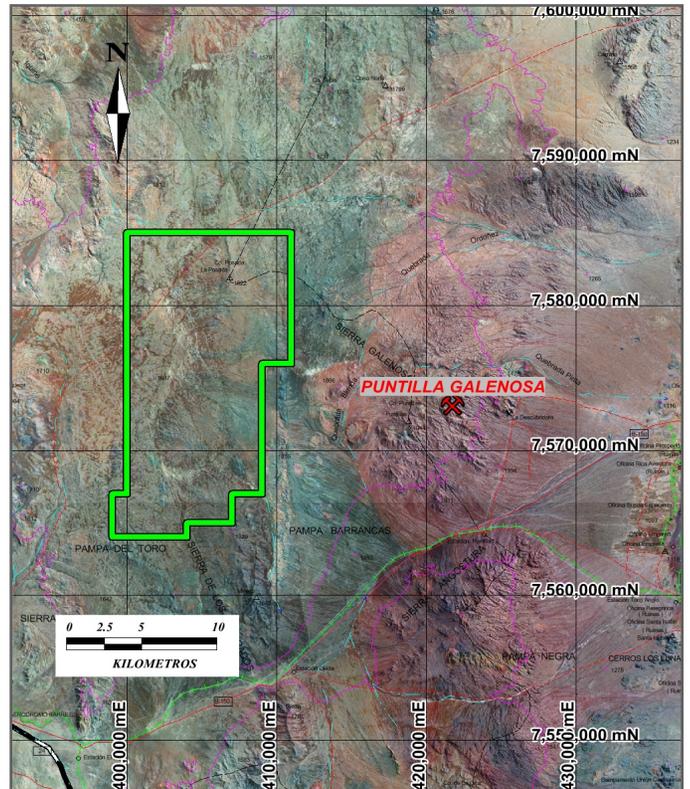

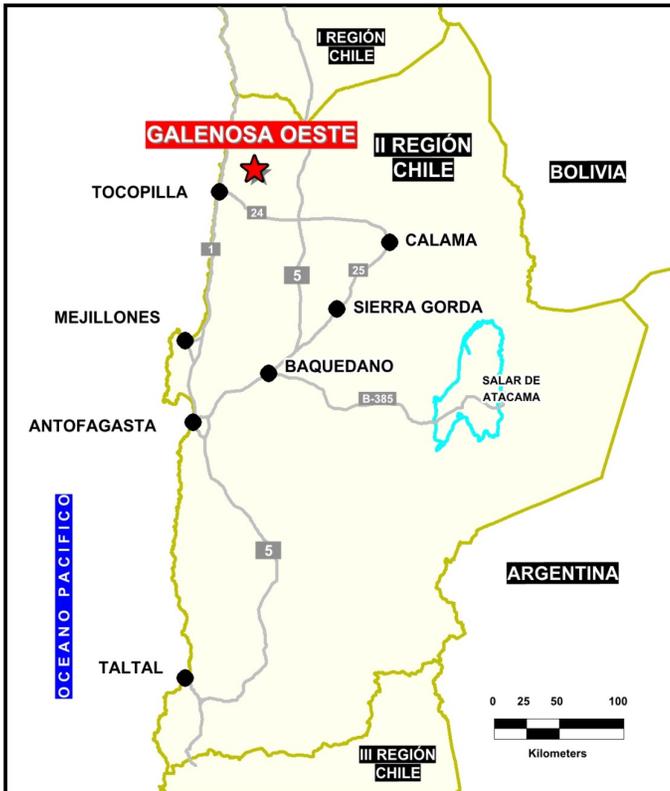

Generative Exploration

Prospect #21

SUMMARY

Prospect area is approximately 60% gravel covered with outcropping La Negra Formation units with dominant N-S and NW-SE structural trends.

Sampling to date has focused around a branch of the Atacama Fault but anomalous copper results occur widely throughout the area related with copper oxide mineralization in fractures.

HIGHLIGHTS

Central Northing (UTM):	7575000
Central Easting (UTM):	404000
Elevation (masl):	1720
Metal(s):	Cu
Deposit Style:	IOCG, Porphyry Copper
Exploration Stage	Generative Exploration
Area (hectares)	21000
Nearest Project:	Tovaku (Pucobre Codelco)
Historical:	Trenching by unknown

EXPLORATION WORK

Geological Mapping:	1:50000
Geochemical Samples:	96
Trenching	N/A
Channel Samples	N/A
Geophysics:	N/A
RC Drill holes	N/A
DDH Drill holes:	N/A
Total drilling :	N/A
Other:	Petrography results
