Prospect #92

## SUMMARY

Concession block on trend with ENE-WSW El Guanaco vein system, and having anomalous Ag values with up to and 1% As.

Extensive outcrops of brecciated silica bodies with alunite, trending N-S, possibly with vuggy silica textures, and fragments of rhyolitic host rocks.

Pampa Hoyada: Green fields area on trend with the mineralized vein systems of the producing El Guanaco gold mine.

## HIGHLIGHTS

|                         |                       |
|-------------------------|-----------------------|
| Central Northing (UTM): | 7215000               |
| Central Easting (UTM):  | 434000                |
| Elevation (masl):       | 2500                  |
| Metal(s):               | Ag, Au, Cu            |
| Deposit Style:          | Epithermal, Porphyry  |
| Exploration Stage       | Basic Exploration     |
| Area (hectares)         | 9010                  |
| Nearest Project:        | El Guanaco            |
| Historical:             | 99 salt crust samples |

## EXPLORATION WORK

|                      |                            |
|----------------------|----------------------------|
| Geological Mapping:  | 1:25000                    |
| Geochemical Samples: | 107                        |
| Trenching            | N/A                        |
| Channel Samples      | N/A                        |
| Geophysics:          | TEM (19,4Km), airborne mag |
| RC Drill holes       | 8 (1476 m)                 |
| DDH Drill holes:     | N/A                        |
| Total drilling :     | 8 (1476 m)                 |
| Other:               | 60% cover                  |
